ADEQUATE MENSTRUAL HYGIENE FACILITIES

Output indicator

Indicator Phrasing

INDICATOR PHRASING: Number of schools with access to adequate, safe and private menstrual hygiene facilities for all female students as a result of the project's support

What is its purpose?

The indicator measures the number of schools with appropriate menstrual hygiene facilities as a result of the project's support. Such facilities allow girls to spend more time in school and to feel more comfortable and self-confident.

How to Collect and Analyse the Required Data

Conduct a survey using observations in your target schools:

RECOMMENDED SURVEY QUESTIONS (Q) AND POSSIBLE ANSWERS (A)

Q1 for data collectors: Does the school have separate latrines for girls?

A1: yes / no

Q2 for data collectors: Are the latrines reasonably clean?

A2: yes / no

Q3 for data collectors: Can the latrines be locked from inside?

A3: yes / no

Q4 for data collectors: Do the latrines offer sufficient privacy? (i.e. not having any gaps or spaces)

A4: yes / no

Q5 for data collectors: Is water for washing hands available near the latrines?

A5: yes / no

Q6 for data collectors: Do the latrines have covered trash bins for disposal of used sanitary materials?

A6: yes / no

Q7: Is the floor of the latrine washable?

A7: yes / no

The school can be considered as having "adequate menstrual hygiene facilities" if the answers to all seven questions are YES.

To **calculate the indicator's value**, sum up the number of schools with adequate menstrual hygiene facilities.

Disaggregate by

To be added later

Important Comments

1) Consider **crosschecking the validity** of your conclusions with the girls studying in the assessed schools (through semi-structured interviews or sensitively facilitated focus group discussions).
